2018 Ohio Dredged Material Summit

LOCATION: Lorain County Community College

Half the dredged material coming out of the Great Lakes comes from Ohio. Rather than dump this valuable resource into Lake Erie, Ohio is using the material to add value to our communities and our Lake. In 2016, we heard your ideas. Now, we are following up on implementing them and laying out a plan going forward. But we still need your help...

WHO SHOULD ATTEND? Anyone with ideas. Seeking participation from experts in:

- | | |
|-------------------------|----------------------------------|
| Dredge Contractors | Brownfields |
| Materials Management | Brick and Clay Products |
| General Construction | Transportation and Logistics |
| Road Construction | Economic Development |
| Engineering | City and Regional Planning |
| Green Building | Parks and Natural Areas |
| Landscaping and Nursery | Habitat Creation and Restoration |
| Landscape Architecture | Mining |
| Turfgrass | |
| Agriculture | |

MORE INFORMATION TO COME

Ohio's Lake Erie harbors generate more than \$25 billion in annual business revenue. Much like roads need repaving, Ohio's harbors need regular dredging to ensure safe navigation. Current practice is to dump most of that dredged material into Lake Erie. However, open lake disposal will be prohibited in Ohio as of July 1, 2020.

In 2016, Ohio held *Ohio's Digging Up Ideas Workshop*, and asked for your help to identify alternatives for the dredged material and barriers for possible use. That workshop gave the State and others a lot of great ideas that Ohio, the U.S. Army Corps of Engineers, businesses and local stakeholders have vigorously pursued.

Now, it's time for us to report back on our progress and ask for more advice.

Here is what to expect at the upcoming summit:

- Program Updates
- Regulatory Changes
- Project Reviews
- Roundtable Discussions
- Resources Available to Businesses
