<sup>1</sup> Design flows that are greater than 1.0 million gallons per day (MGD) classify a facility as a major discharger.

<sup>2</sup> Average flows are displayed for 2007 through 2011 unless otherwise noted.

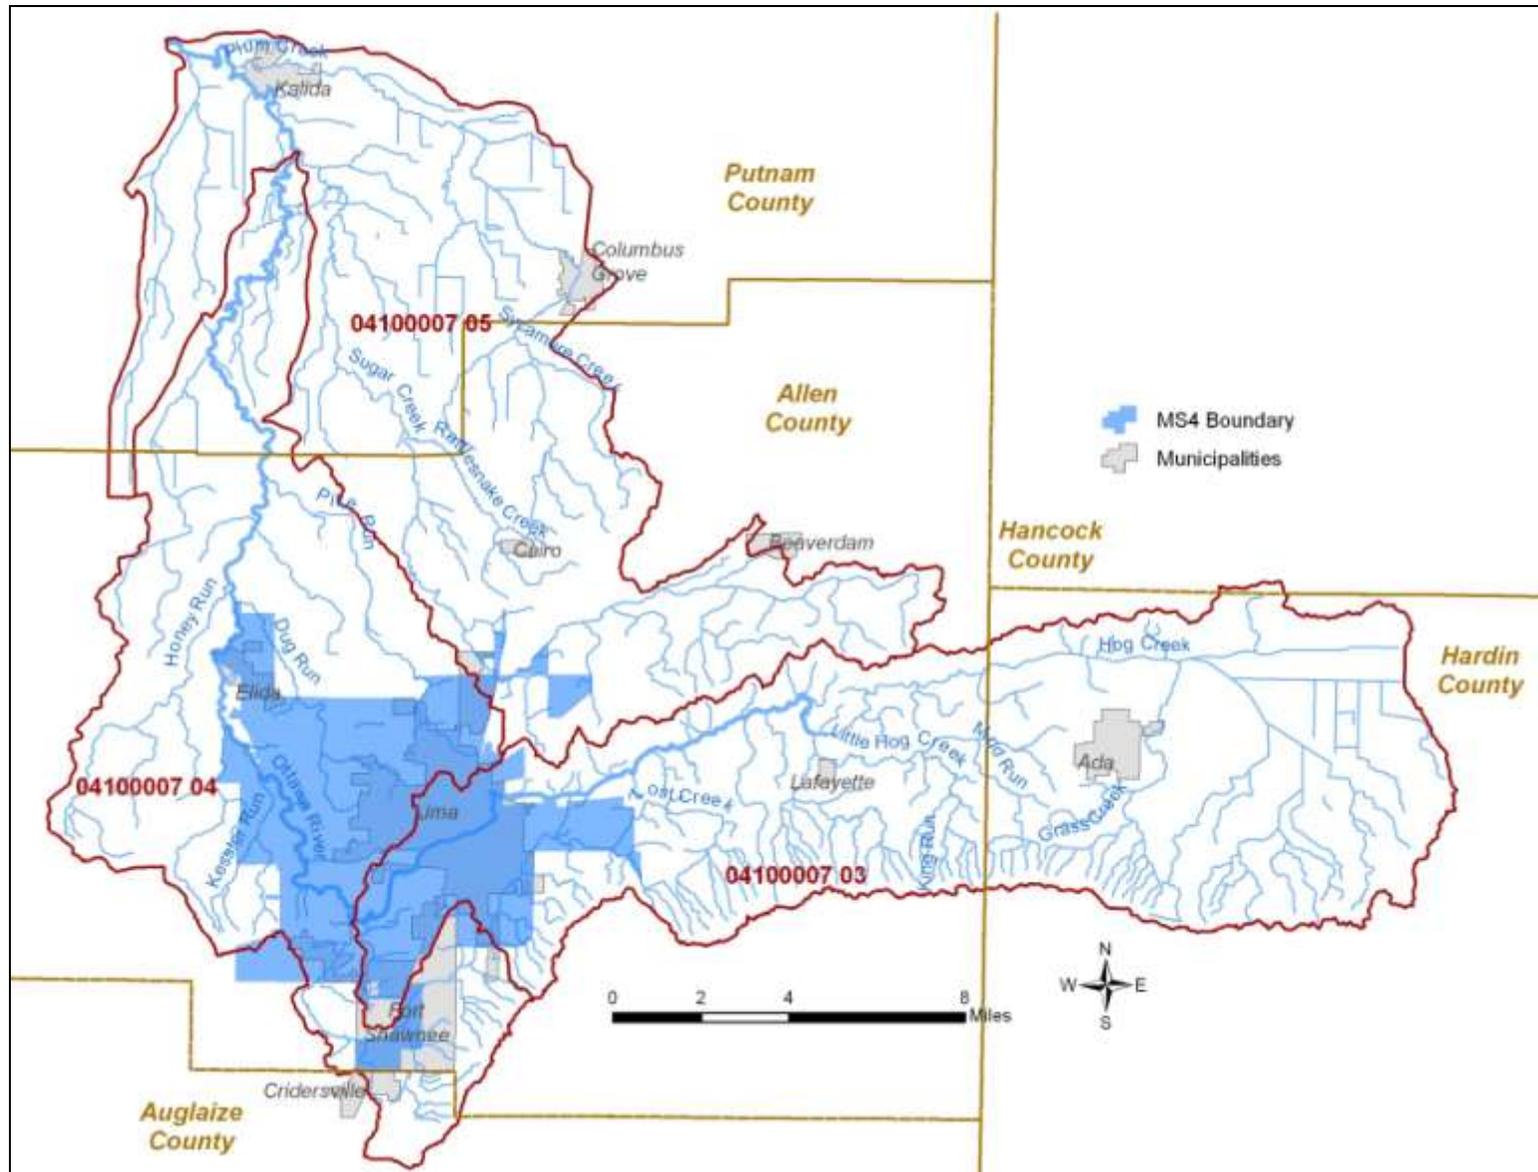

<sup>3</sup> The first letter indicates the number of permit cycles that have occurred for the facility, where “A” represent the first and “B” represents the second and so on. Permit cycles typically occur over five year time periods.

<sup>4</sup> “Storm water” indicates that this facility is only designed to treat storm water associated with an industrial activity and therefore does not have a design flow rate.

<sup>5</sup> The permit has not been renewed because of enforcement actions.

<sup>6</sup> A permit-to-install has been submitted to connect the Indian Village MHP to sanitary sewers. It is not expected that this permit will be renewed.
