

**\*\*\*DRAFT - NOT FOR FILING\*\*\***

**3745-34-30 Corrective Action.**

- (A) Any permit issued for an existing injection well requiring corrective action other than pressure limitations shall include a compliance schedule requiring any corrective action accepted or prescribed under this chapter. Any such compliance schedule shall provide for compliance no later than two years following issuance of the permit and shall require observance of appropriate pressure limitations under paragraph (C) of this rule until all other corrective action measures have been implemented.
- (B) New injection wells. No owner or operator of a new injection well may begin injection until all required corrective action has been taken.
- (C) The director may require pressure limitations in lieu of plugging. If pressure limitations are used in lieu of plugging, the director shall require as a permit condition that injection pressure be so limited that pressure in that injection zone at the site of any improperly completed or abandoned well within the area of review would not be sufficient to drive fluids into or between USDWs. The pressure limitation shall satisfy the corrective action requirement. Alternatively, such injection pressure limitation may be made part of a compliance schedule and may be required to be maintained until all other required corrective actions have been implemented.
- (D) The director may require the owner or operator of a class I injection well to provide the information required by paragraph (B)(4) of rule 3745-34-13 of the Administrative Code.
