3745-511-432

Leachate collection system pipes.

Leachate collection system pipes shall be designed to meet the following criteria:

(A) Be imbedded in the leachate collection system drainage layer.

(B) Have a slope not less than 0.5 per cent.

(C) Have access for cleanout and sampling devices. The access shall be protected from damage caused by differential settling and by vehicles.

(D) Have lengths and configurations that shall not exceed the capabilities of the cleanout devices.
