Assessment of existing tank system's integrity.

(A) For each existing tank system that does not have secondary containment meeting the requirements of that is in compliance with rule 3745-55-93 of the Administrative Code, the owner or operator must determine that the tank system is not leaking or is unfit for use. Except as provided in paragraph (C) of this rule, within thirty days after December 8, 1988, the owner or operator must obtain and keep on file at the facility a written assessment that has been reviewed and certified by a qualified professional engineer, in accordance with paragraph (D) of rule 3745-50-42 of the Administrative Code, that attests to the tank system's integrity within thirty days after December 8, 1988.

(B) This assessment must determine that the tank system is adequately designed and has sufficient structural strength and compatibility with the waste(s) to be stored or treated, to ensure that it will not collapse, rupture, or fail. At a minimum, this assessment must consider all of the following:

1. Design standards, if available, according to which the tank and ancillary equipment were constructed.
2. Hazardous characteristics of the waste(s) that have been handled.
3. Existing corrosion protection measures.
4. Documented age of the tank system, if available (otherwise, an estimate of the age).
5. Results of a leak test, internal inspection, or other tank integrity examination such that:
   a. For non-enterable underground tanks, the assessment must include a leak test that is capable of taking into account the effects of temperature variations, tank end deflection, vapor pockets, and high water table effects.
   b. For other than non-enterable underground tanks and for ancillary equipment, this assessment must include either a leak test, as described above in this rule, or other integrity examination that is certified by a qualified professional engineer in accordance with paragraph (D) of rule 3745-50-42 of the Administrative Code, that addresses cracks, leaks, corrosion, and erosion.
[Comment: The practices described in the "American Petroleum Institute (API)" publication, "Guide for Inspection of Refinery Equipment," chapter XIII, "Atmospheric and Low-Pressure Storage Tanks," fourth edition, 1981, may be used, where applicable, as guidelines in conducting other than a leak test.]

(C) Tank systems that store or treat materials that became hazardous wastes subsequent to July 14, 1986 must conduct this assessment within twelve months after the date that the waste becomes a hazardous waste.

(D) If, as a result of the assessment conducted in accordance with paragraph (A) of this rule, a tank system is found to be leaking or unfit for use, the owner or operator must comply with the requirements of rule 3745-55-96 of the Administrative Code.

[Comment: For dates of non-regulatory government publications, publications of recognized organizations and associations, federal rules, and federal statutory provisions referenced in this rule, see rule 3745-50-11 of the Administrative Code titled "Incorporated by reference." ]
