

3745-68-75 Waste analysis.

In addition to the waste analyses required by rule 3745-65-13 of the Administrative Code, the owner or operator shall sufficiently analyze any waste which he has not previously treated in his thermal treatment process to enable him to establish steady state (normal) or other appropriate (for a non-continuous process) operating conditions, including waste and auxiliary fuel feed, and to determine the type of pollutants which might be emitted. At a minimum, the analysis shall determine:

- (A) Heating value of the waste;
- (B) Halogen content and sulfur content in the waste; and
- (C) Concentrations in the waste of lead and mercury, unless the owner or operator has written, documented data that show that the element is not present.

[Comment: As required by rule 3745-65-73 of the Administrative Code, the owner or operator shall place the results from the waste analysis, or the documented information, in the operating report of the facility.]
