

Ohio Diesel Mitigation Trust Level 2 EV Charging Grant Program Awards 2021

Ohio EPA representatives reviewed 123 applications for 236 sites and 869 EV charging ports and requesting more than \$5.5 million. Projects were ranked based on the cost effectiveness of the number of installed chargers, number of hours the chargers are available, relative location to the nearest charger, proximity of higher traffic areas, proximity to amenities, the number of proposed chargers, the ability for expanding the number of chargers, the use of state term contract, and charging locations identified in Drive Ohio's "Electric Vehicle Supply Equipment Siting Study".

The following 104 applications for 179 sites and 631 ports are being awarded full or partial funding, for a total of \$3,279,999. Ohio EPA estimates that these projects will achieve an annual emission reduction of more than 0.588 tons of nitrogen oxides and 12.736 tons of other pollutants (fine particulates (PM2.5), carbon monoxide, volatile organic compounds, sulfur oxides and greenhouse gases) to assist Ohio counties in meeting and maintaining federal air quality standards. These emission reduction benefits will compound every year that these chargers remain in service.

These grants are supported with funds allocated to Ohio under the VW State Beneficiary Trust Agreement, as a result of enforcement action by U.S. EPA and the State of California.
